

INTERNATIONAL DISTANCE LEARNING ACADEMY (IDLA)

MScFE AMBASSADOR PROGRAM

Recruitment, Compensation and Scholarship Conditions

1. Program Overview

• The MScFE Ambassador Program of the International Distance Learning Academy (IDLA) aims to mobilize 110 ambassadors, including 10 per country of the CEMAC sub-region, who are able to promote the MScFE program and refer students who meet the selection criteria. It is based on two distinct mechanisms: a commission linked to students who are effectively selected and up to date, and a progressive personal scholarship for ambassadors who wish to pursue the MScFE program themselves.

01. Description and Interdisciplinary Positioning

The Master of Science in Financial Engineering (MScFE) is an excellence program positioned at the intersection of several strategic disciplines. It synergistically integrates artificial intelligence applied to finance (for predictive modeling and large-scale data processing), mathematics applied to finance (for asset valuation and risk management), finance applied to management (for strategic decision-making and corporate finance), as well as computer science applied to finance (for algorithm development and quantitative software engineering).

• Academic Objective: Provide an excellence education combining advanced mathematics, computer programming, financial modeling, and data analysis to prepare experts to international standards.

02. Program Description

• Delivery Format: In-person instruction supplemented by mandatory academic support required by the university and provided by qualified teachers and international instructors from WQU-USA and IDLA — Yaoundé, Cameroon.

2. Ambassador Commission

Every ambassador receives a 12.5% commission, equivalent to 50,000 FCFA, for each selected and up-to-date candidate. This commission applies to all ambassadors, including Quant Ambassadors who do not wish to enroll in the MScFE program.

3. MScFE Personal Scholarship Scale

For ambassadors who wish to pursue the MScFE program themselves, the number of students referred determines the remaining amount to be paid:

Students Referred and Validated	REMAINING AMOUNT TO PAY
1 student	400,000 FCFA
2 students	350,000 FCFA
3 students	300,000 FCFA
4 students	250,000 FCFA
5 students	200,000 FCFA
6 students	100,000 FCFA
7 students	One year of MScFE offered + application fees fully covered by IDLA for 1 year.
10 students	2 years of Master's degree offered + application fees fully covered by IDLA.

Note: After receiving the first-year scholarship, the ambassador has the following options:

— either complete the remaining 3 referrals before the beginning of the courses for that year in order to automatically secure the following year.

— or complete the 3 remaining referrals no later than December 20, 2027, at the opening of the second academic year. To secure the year administrative fees.

4. General Validation Conditions

- A student is counted when they have been referred by the ambassador, their enrollment in the program has been confirmed, and the established financial admission conditions have been met.
- The scholarship scale applies to ambassadors who wish to personally pursue the MScFE program. It does not condition the right to the 12.5% commission.
- Commissions are calculated based on the number of students finally admitted. Verification, validation, and payment procedures are communicated by IDLA.
- Scholarships are not convertible into cash and may not be combined with another form of financial support, unless otherwise agreed in writing by IDLA.
- Any student attribution and any scholarship or commission validation are carried out by IDLA based on its official records.

5. Commitment and Spirit of the Program

By joining the program, the ambassador contributes to the development of the MScFE in the Central African sub-region and the CEMAC area. They benefit from a transparent scheme combining performance-based compensation with the possibility of financing their own education.

Presentation document — Operational monitoring and payment procedures are determined by IDLA.
